Alameda County • Single Family Residence • January 2024 – April 2026

~\$1.20M

Median Close Price

~15–20 days

Avg. Days on Market

100–110%

Close-to-List Ratio

~600–720

Peak Monthly Sales

1. MARKET OVERVIEW

Alameda County SFR delivered a stable-to-resilient market from 2024 through early 2026. Median close prices held in the \$1.10M-\$1.33M band with seasonal softening each winter (trough ~\$1.08M in Jan 2026) and spring recoveries. Average days on market compressed sharply, from a peak of ~61 days in February 2024 to a stabilized 15-20 days through 2025, signaling consistently strong absorption.

2. PRICING TRENDS

The close-to-original-list-price ratio held at 100-110% for nearly every month observed, confirming sellers routinely achieved or exceeded asking price, a hallmark of supply-constrained Bay Area markets. Across price tiers, the \$1M-\$2M segment showed close prices consistently at or above list price, while the \$2M-\$5M tier also demonstrated above-ask closings, reflecting competitive bidding even in the luxury segment.

3. MARKET ACTIVITY

New listings and closed sales both exhibited predictable seasonality: spring/summer peaks (new listings ~715-745/month, May-July) and winter troughs (~230/month, Dec-Jan). Closed sales peaked at ~720 in May 2024 and ~650 in May-June 2025, with Jan 2025 and Jan 2026 dipping to ~290 and ~275 respectively. The consistent alignment of supply and demand across both years points to a market operating in structural equilibrium.

4. COMPETITIVE LANDSCAPE

#1 Office	Compass: ~1,620 units; nearly 3x second-place volume
#2–#4 Offices	Intero Real Estate (~570), Coldwell Banker Realty (~540), Red Oak Realty (~410)
Top Named Agents	Leo Zhang (~49 units), Gagan Singh (~31), Hira Bakhsh & Robert Luecke (~25 each)
Fastest Offices	eXp Realty of Greater LA (~7 days DOM), Berkshire Hathaway (~10 days)
Geography	Highest prices & volume concentrated in eastern corridor (Fremont/Tri-Valley zip codes)

5. KEY TAKEAWAYS

- Prices are sticky. The \$1.1M-\$1.3M median close price range has held remarkably consistent across 27 months, with no sustained downward trend.
- The market absorbed its supply efficiently. DOM compressed from 61 days (Feb 2024) to 15-16 days (early 2026), a 75% reduction in a single year.
- Sellers hold pricing power. A close-to-list ratio above 100% in nearly every month confirms buyers are bidding competitively, including in the \$2M+ tier.
- Compass dominates brokerage activity but the gap narrows among velocity. Volume leader Compass averages ~18 days DOM vs. ~7-10 days for smaller but faster boutique offices.
- Out-of-area agent attribution is a data quality concern. Multiple top-ranked “agents” are placeholder designations, likely understating true individual agent performance.
